SOIL AND GROUNDWATER SAMPLING USING GEOPROBE® TECHNOLOGY

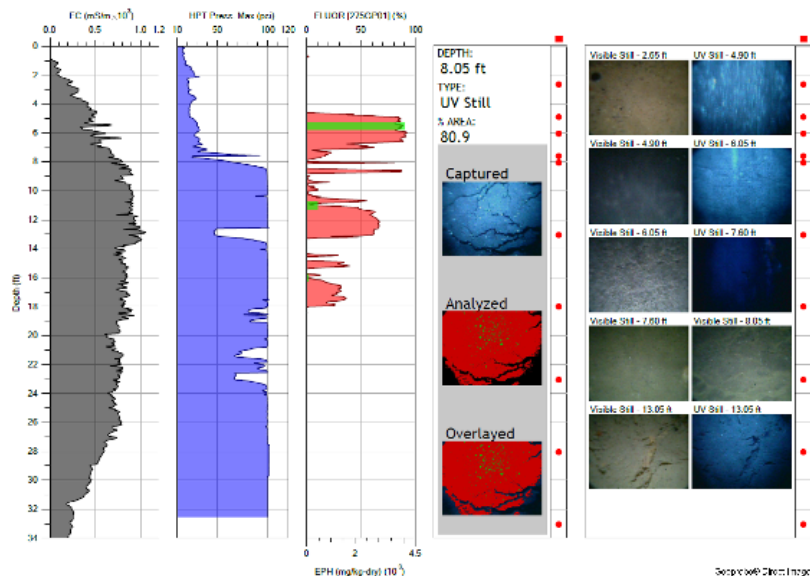

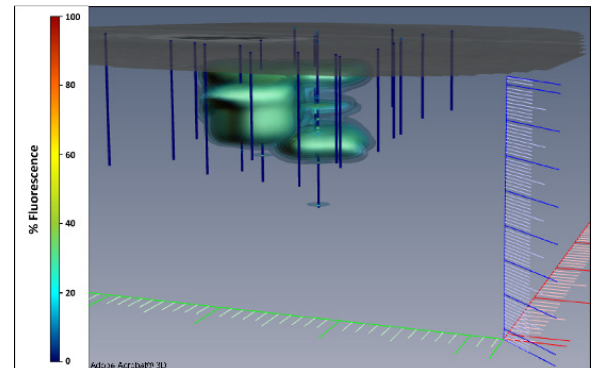

Enviro Probe provides economical subsurface investigation services that assist in identifying and solving complex environmental issues. Our operators have over 15 years of experience employing Geoprobe system technology to collect continuous or discrete soil and groundwater samples. Enviro Probe offers services throughout Montana, Idaho, Utah, Wyoming, North Dakota, South Dakota, Eastern Washington, and Canada.

Sampling Capabilities

Geoprobe systems' tools create small diameter borings which minimize surface and subsurface disturbance. Minimal cuttings are produced during the sampling process and mobilization is quick and economical.

Our Geoprobos are capable of:

- Continuous Soil Cores
- Discreet Groundwater Sampling
- Permanent Sampling Wells
- Subsurface Characterization and Visualization
- Direct Image® Optical Image Profiler (OIP) and Hydraulic Profiling Tool (HPT)
- Soil gas samples

These units provide flexible, cost-effective environmental sampling and can assist in identifying and solving complex environmental issues, allowing you to meet your project deadlines. What sets the Geoprobe apart from other drilling units are its economical rates and the system's ability to access the areas needed despite close quarters and low clearance.

Equipment

Geoprobe 3100 GT

- 5-Foot Core
- Up to Two-Inch Diameter Monitoring Wells
- Dual Tube Coring (DT22 and DT325)
- OIHPT Direct Push NAPL Tool
- Hollow-Stem Auger

Geoprobe 6600

- 5-Foot Macro-Core
- Dual Tube Coring (DT22)
- Screen Point Groundwater Sampler
- Soil Gas Implants
- Small Diameter Monitoring Wells
- OIHPT Direct Push NAPL Tool

Geoprobe 5410

- 4-Foot Macro-Core
- Small Diameter Monitoring Wells
- Screen Point Groundwater Sampler
- Soil Gas Implants
- High Pressure GP350 Injection System

OIHPT Set Up

- Simultaneously captures soil EC, HPT, PAH fluorescence, visible and UV imagery
- Real time logging results display
- Expedient reports with expert interpretation
