## GIS/DATABASE DEVELOPMENT

Since its inception in 2000, Water & Environmental Technologies (WET) has grown from a highly specialized group of groundwater professionals into a full-service geoscience, environmental, and engineering consulting firm that offers GIS/database development.

### Advanced ESRI/ArcView

WET provides professional GIS/spatial mapping services focusing on stormwater and sanitary sewer engineering, GIS and remote field data collection, environmental permitting and compliance, surface and groundwater issues, natural resource evaluation, water resource monitoring, development, and planning, land development, site investigation, and site remediation to both private and public industries. WET's experienced staff realizes the rapid pace of technological changes and is committed to keeping staff up to date with cutting edge technology through training conferences, technical sessions, online webinars, and professional organizations.

### Custom Data Applications

WET develops custom data applications and we can design database mapping as well as a wide variety of other custom data applications. Our team has assisted clients in both the private and public sectors developing applications that save hundreds of hours of work compared to traditional paper methods. Our team can design applications specific to you organization, data collection, and reporting needs.

### Remote Data Collection

WET's team of GIS professionals have extensive experience in remote data collection and have successfully developed custom mapping applications for Windows, IOS, and Android devices. We have vast experience in applications for roads, infrastructure, watersheds, weeds, and many more. Our UAV mapping and GIS analysis can save you time and money collecting and analyzing various data sources using high-resolution aerial photography, RGB, infrared or thermal cameras.

### Web Mapping

WET can assist in moving your spatial data to the web with ESRI's ArcGIS Online or a hosted solution. We have the experience to create basic to enterprise websites and web mapping applications. WET has developed numerous web mapping applications for county and private organizations using ESRI applications.

## Geodatabases

WET's diverse group of GIS and survey professionals can assist with a wide variety of geodatabase development projects, and we can help you efficiently inventory and manage your infrastructure. Our geodatabase services include paper map to digital conversion, CAD to GIS conversion, GPS data collection (sub-centimeter to sub foot), GIS layer and attribute development, and 911 mapping.
