LANDSCAPE ARCHITECTURE

Water & Environmental Technologies (WET) is a full-service consulting firm that offers landscape architecture services.

Landscape architecture is the planning and implementation of the interface between the built and natural environments. It encompasses a wide range of projects and needs ranging from shaded bikeways on complete streets to multi-acre green infrastructure corridors. Simply put, it's your environment, designed. WET creates thoughtful, site-specific designs at all scales and in all communities. From helping a homeowner turn a soil issue into a backyard oasis to planning regional park amenities for all ages, WET is here to help.

The idea that nature is also infrastructure is not new. Green infrastructure occurs at all scales—from conveying stormwater on site to planning multi-acre greenway park corridors. Some of the services we offer are the design and planning of:

- Subdivisions
- Greenways, Parks, and Trails
- Commercial and Multi-Use Site Developments
- Urban Placemaking and Streetscapes
- Campus, Institutional, and Healthcare Environments
- Green Infrastructure
- Gateways, Entry, and Transportation Corridors
- Reclamation/Restoration
- Community Planning
- Residential

As we work on projects across the west and help communities and clients created spaces that people want to live, work, play, and learn in. Some examples of things we can design that support placemaking are trail systems, wayfinding and signage packages, parklets, public art, and streetscapes. The best part is that WET is part of a collaborative team. This means if complex permitting is required, if site remediation is necessary, or if grant writing is needed, WET has that knowledge and more under one roof. Most people have heard of LEED; however, SITES is another US Green Building Council certification that focuses on site development rather than buildings. There are currently only two SITES Associates in the state of Montana and none to date in Wyoming. From raw ground to finished project, we can help you every step of the way.
