## MINING SERVICES

Since its inception in 2000, Water & Environmental Technologies (WET) has grown from a highly specialized group of groundwater professionals into a full-service geoscience, environmental, and engineering consulting firm that offers an array of mining services.

From procurement support to construction services and construction management for new and existing mines, we are able to assist mining companies and mineral exploration companies in various capacities.

WET provides various environmental and civil consulting and engineering services for the mining industry. On the environmental side, we offer geologic, hydrogeological assessments, site investigation and characterization, design and permitting of industrial water wells for mine supply, groundwater and surface water monitoring, water resource management, permitting/due diligence, and other ancillary services as well as management and oversight of other baseline study contractors. Our civil engineering services include all types of civil design, stormwater, wastewater, ponds, and other infrastructure design. From procurement support, exploration and permitting, to construction services and construction management for new and existing mines, we can assist mining companies and mineral exploration companies in various capacities.

Environmental regulation and public scrutiny present unique challenges to the mining industry. WET's expertise in environmental regulatory compliance and natural resource management has been a powerful tool in helping mining companies navigate their coal, hard rock, sand, and gravel regulatory requirements, including reclamation and restoration operations. We understand the challenges of environmental impacts to natural resources, water resource supply and protection, and the public's perception of the mining industry. We also offer one-stop shopping for environmental services, strong relationships with regulatory agencies, and in-depth knowledge of environmental laws and regulations.

WET offers the experience and knowledge to help mining companies meet the diverse, and sometimes difficult technical challenges unique to their industry in a practical and reliable manner. We assist our clients as they balance operational efficiency with the requirements of good stewardship, environmental sustainability, and site-specific regulatory requirements. We consistently maintain a focus on quality, safety, and sustainability. From sustainable water management and natural resources engineering to mine remediation and closure, WET provides comprehensive consulting, engineering, construction, quality assurance, and program management services to the mining industry across the Rocky Mountain region. We apply our expertise and knowledge to assist mining companies with their environmental, water, waste management, and infrastructure projects. Our strong culture of project management is supported by proven cost, schedule and quality control systems.
